This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 21 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Claim xxx. (New) A method for preventing unauthorized access to a resource within a computer network based on a communication attempt from an authorized computer within the computer network, wherein an authorized user has logged into the authorized computer, wherein the authorized user and the authorized computer each have associated therewith a respective access policy profile defining their rights to access resources within the computer network, wherein the communication attempt uses TCP/IP protocol and is initiated by transmission of a synchronization packet from the authorized computer, and wherein the synchronization packet includes a sequence number (SEQ) field and an acknowledgement (ACK) field, comprising the steps of:

assigning a non-dynamic system identifier (SID) to the authorized computer;

assigning a user identifier (UID) to the authorized user logged into the authorized computer;

upon initiation of the communication attempt by the authorized computer, inserting the UID and the SID into the SEQ and ACK fields of the synchronization packet; and

intercepting the synchronization packet within the computer network;

extracting the UID and SID from the SEQ and ACK fields of the synchronization packet; and

granting access to the resource as a function of the access policy profiles of the authorized computer and the authorized user based on the extracted UID and SID.
